GitHub Search — CLAUDE.md, Skills & MCP

- Finding Claude Skills
- Finding `.mcp.json` (MCP server config)

GitHub Search — CLAUDE.md, Skills & MCP

In GitHub Search:

```
filename:CLAUDE.md
```

To search within a single organization:

```
filename:CLAUDE.md org:anthropic
```

Within a single repository:

```
filename:CLAUDE.md repo:owner/repo
```

To search for the instructions inside CLAUDE.md:

```
"pathspec" filename:CLAUDE.md
```

To search using Google:

```
site:github.com "CLAUDE.md"
```

GitHub Code Search URL:

```
https://github.com/search?q=filename%3ACLAUDE.md&type=code
```

Using the CLI (`gh`):

```
gh search code "filename:CLAUDE.md"
```

These days, repos that use Claude Code often store their project instructions, coding standards, and workflow rules in `CLAUDE.md`. GitHub Code Search is the best way to find them.

Finding Claude Skills

Skills live in `.claude/skills/<name>/SKILL.md`.

```
filename:SKILL.md
```

To search by the skill folder path (`path:`):

```
path:.claude/skills SKILL.md
```

To search for a word inside the skill description (frontmatter):

```
"description:" filename:SKILL.md
```

To limit the search by org / repo:

```
filename:SKILL.md org:anthropics
filename:SKILL.md repo:owner/repo
```

Using the CLI (`gh`):

```
gh search code "filename:SKILL.md"
gh search code "path:.claude/skills SKILL.md"
```

URL:

```
https://github.com/search?q=filename%3ASKILL.md&type=code
```

Finding `.mcp.json` (MCP server config)

`.mcp.json` is the file that defines a project's MCP servers. It's useful for seeing which MCP servers other people are using.

```
filename:.mcp.json
```

To find repos that use a specific MCP server (for example `playwright`):

```
"mcpServers" "playwright" filename:.mcp.json
```

By org / repo:

```
filename:.mcp.json org:anthropics  
filename:.mcp.json repo:owner/repo
```

Using the CLI (**gh**):

```
gh search code "filename:.mcp.json"  
gh search code '"mcpServers" filename:.mcp.json'
```

URL:

```
https://github.com/search?q=filename%3A.mcp.json&type=code
```

Note: In the new GitHub code search, you can use **path:** instead of **filename:** (for example, **path:**/SKILL.md**). Both work.
